the mistake in the loop condition.

```
public class Q1_ArrayIndex {
    public static void main(String[] args) {
        int arr[] = {10, 20, 30};
        for(int i = 0; i < arr.length; i++){
            System.out.println(arr[i]);
        }
    }
}
```

Your Code

```
1 import java.util.*;
2 public class Q1_ArrayIndex{
3     public static void main(String[]args)
4     {
5         int arr[]={10,20,30};
6         for(int i=0;i<arr.length;i++)
7         {
8             System.out.println(arr[i]);
9         }
10    }
11 }
```

Input

stdin input

Output

```
10
20
30
```

Visible Test Cases

```
if(str != null)
    System.out.println(str.length());
else
    System.out.println("String is null");
}
```

Your Code

```
1 import java.util.*;
2 class NullPointer{
3     public static void main(String[]args)
4     {
5         String str=null;
6         if(str!=null)
7         {
8             System.out.println(str.length());
9         }
10        else
11        {
12            System.out.println("string is null");
13        }
14    }
15 }
```

Input

JAVA

Output

```
string is null
```

Visible Test Cases

Test Case 1

```
String s1 = "Java";
String s2 = new String("Java");
if(s1.equals(s2)){
    System.out.println("Equal");
}
}
}
```

Your Code

```
1 import java.util.*;
2 class StringCompare{
3     public static void main(String[]args)
4     {
5         String s1="java";
6         String s2= new String("java");
7         if(s1.equals(s2))
8         {
9             System.out.println("equal");
10        }
11    }
12 }
```

Input

stdin input

Output

equal

```
public class Q4_Loop {
    public static void main(String[] args) {
        int i = 0;
        while(i < 5){
            System.out.println(i);
            i++;
        }
    }
}
```

Your Code

```
1 import java.util.*;
2 public class Q4_loop{
3     public static void main(String[]args){
4         int i=0;
5         while(i<5){
6             System.out.println(i);
7             i++;
8         }
9     }
10 }
```

Input

stdin input

Output

0
1
2
3
4

```
public static void main(String[] args) {
    String str = "Hello";
    String rev = "";
    for(int i = 0; i < str.length(); i++){
        rev = str.charAt(i) + rev;
    }
    System.out.println(rev);
}
}
```

Your Code

```
1 import java.util.*;
2 class Reverse{
3     public static void main(String[] args){
4         String str="hello";
5         String rev="";
6         for(int i=0;i<str.length();i++){
7             rev=str.charAt(i)+rev;
8         }
9         System.out.println(rev);
10    }
11 }
```

Input

stdin input

Output

olleh

Visible Test Cases

```
int sum = 0;
for(int i=0;i<arr.length;i++){
    sum += arr[i];
}
System.out.println(sum);
}
}
```

Your Code

```
1 import java.util.*;
2 public class Q6_ArraySum{
3     public static void main(String[] args){
4         int arr[]={1,2,3,4};
5         int sum=0;
6         for(int i=0;i<arr.length;i++){
7             sum+=arr[i];
8         }
9         System.out.println(sum);
10    }
11 }
```

Input

stdin input

Output

10

Visible Test Cases

A program tries to access a character from a string using an invalid index, causing an exception. Identify and correct the issue.

```
public class Q7_StringIndex {  
    public static void main(String[] args) {  
        String str = "Java";  
        System.out.println(str.charAt(3));  
    }  
}
```

Your Code

```
1 import java.util.*;  
2 public class Q7_StringIndex{  
3     public static void main(String[] args){  
4         String str="java";  
5         System.out.print(str.charAt(3));  
6     }  
7 }
```

Input

stdin input

Output

a

Visible Test Cases

A string comparison fails due to case sensitivity. Modify the program to make the comparison case-insensitive.

```
public class Q8_CaseInsensitive {  
    public static void main(String[] args) {  
        String str = "java";  
        if(str.equalsIgnoreCase("JAVA")){  
            System.out.println("Match");  
        }  
    }  
}
```

Your Code

```
1 import java.util.*;  
2 public class Q8_CaseInsensitive{  
3     public static void main(String[] args){  
4         String str="java";  
5         if(str.equalsIgnoreCase("java")){  
6             System.out.println("match");  
7         }  
8     }  
9 }
```

Input

stdin input

Output

match

Visible Test Cases

The program contains an error in array declaration and initialization. Identify the syntax issue and correct it.

```
import java.util.Arrays;

public class Q9_ArrayDeclaration {
    public static void main(String[] args) {
        int arr[] = {1,2,3};
        System.out.println(Arrays.toString(arr));
    }
}
```

Your Code

```
1 import java.util.*;
2 public class Q9_ArrayDeclaration{
3     public static void main(String[]args){
4         int arr[]={1,2,3};
5         System.out.println(Arrays.toString(arr));
6     }
7 }
```

Input

stdin input

Output

[1, 2, 3]

Visible Test Cases

Your Code

```
1 import java.util.*;
2 class Switch{
3     public static void main(String[]args){
4         int num=2;
5         switch(num){
6             case 1:
7                 System.out.println("one");
8                 break;
9             case 2:
10                System.out.println("two");
11                break;
12             case 3:
13                System.out.println("three");
14                break;
15             default:
16                System.out.println("invalid");
17         }
18     }
19 }
```

Input

stdin input

Output

two
